

EDSA Quick Reference

EDSA quick-reference card

E — Evidence: atomic claim · authority · date · scope · uncertainty

D — Discussion: context · alternatives · limitations · what changes the answer

S — Self-Determination: audience fit · disclosure · pause/exit · no coercion

A — Action: one proportionate step · owner · stop condition · review point

Dual appraisal: audience intelligibility and choice are not the same as platform eligibility and ranking.

Hard stop: diagnosis · causal neuroscience promise · guaranteed trust/reach/outcome · hidden interest/uncertainty · fear/shame/false urgency.

EDSA is an editorial decision architecture. It cannot diagnose a nervous system, predict an individual's response, establish scientific causation, guarantee trust, guarantee platform distribution, or replace legal, medical, scientific, accessibility, or platform-policy review.
