

Commercial-Launch APQ Gap Model

Commercial-Launch APQ Gap Model

Version 2026.08.0 · evidence cutoff 2026-08-03 · frozen pre-release

This dated educational comparison is not legal, investment, licensing, clinical, or market advice. A state authorization is not proof that a program is operational, an applicant is eligible, a license will issue, funding exists, or federal law permits the conduct. Reverify every consequential value with the named authority and qualified counsel.

What APQ means here

APQ means **Authority, Posture-to-practice, and Quantification**. It is a state launch-readiness comparison rubric. It is separate from the DEA term “aggregate production quota.” No state score estimates federal supply, manufacturer quota, market size, probability of approval, or investment return.

Comparison

State	Authority	Posture	Quantification	Total	Dated status
Oregon	3	3	3	9/9	operational
Colorado	3	3	2	8/9	operational-regulated-rollout
New Mexico	3	1	1	5/9	enacted-implementation-pending

A total is the sum of three documented 0–3 inputs. It is useful only with its evidence cutoff, source ledger, unknowns, and narrative. Equal totals can conceal different legal and operational constraints.

Workflow

1. Define the exact operator, activity, location, and decision.
2. Resolve statute, current rules, regulator materials, forms, fees, and operative dates.

3. Label each value operative, pending, proposed, unknown, unpublished, superseded, or nonbinding.
4. Score only supported inputs; hold affected cells where evidence is insufficient.
5. Record fees and deadlines with their primary source and verification date.
6. Classify funders or clients only from entity-specific evidence and preserve rationale.
7. Reverify before consequential use and issue a new immutable version when anything material changes.

Federal boundary

State programs do not remove federal Controlled Substances Act risk. Public DEA aggregate production quota notices do not disclose confidential individual manufacturer quotas and must not be used as if they do.
